

## **ZellBio Zinc (Zn) assay kit (96 Tests) (V4126)**

### **Introduction:**

**ZellBio** (GmbH, Germany) zinc assay Kit provides a simple, reproducible, and standardized tool for assessment of zinc in biological samples e.g. **plasma (EDTA cannot be used), serum, urine, CSF, tissue homogenates, and cell lysates**. Zinc present in the sample is chelated by 5-Br-PAPS in the reagent. The zinc determine colorimetrically at **546nm**.

Zinc is an essential trace metal, which is second only to Iron. It is present in Zinc metallo-enzymes e.g. carbonic anhydrase, alkaline phosphatase, RNA and DNA polymerases, thymidine kinase, carboxypeptidases and alcohol dehydrogenase.

### **Kit Contents:**

1. Reagent 1: ZB-Zn-R1, Zinc Reagent 23mL, (Zn211), Ready to Use.
2. Reagent 2: ZB- Zn-R2, Standard (210 $\mu\text{g}/\text{dL}$ ) 0.4mL, (Zn212).
3. Microplate: ZB-Zn-M, (Zn213).

### **Assay Range:**

ZellBio Zinc assay kit can be used for total zinc content determination in range of up to 400 $\mu\text{g}/\text{dL}$  (61.2 $\mu\text{mol}/\text{L}$ ). Expected Value for human sample usually is 72.6-127 $\mu\text{g}/\text{dL}$  (11.1-19.5 $\mu\text{mol}/\text{L}$ ) for male and 70-114 $\mu\text{g}/\text{dL}$  (10.7-17.5 $\mu\text{mol}/\text{L}$ ) for female.

## **Assay Sensitivity:**

ZellBio zinc assay kit can determine zinc content in wide variety of biological samples with 10 µg/dL sensitivity. The assay sensitivity was determined based on zero standard signal repeat and Mean±2SD.

## **Assay Precision:**

Human serum sample with replication No.10 showed the intra and inter assay coefficient of variation 1.8% and 2.3% respectively.

## **Assay Protocol:**

All reagents/samples must be equilibrated to RT before test. Shake the samples for homogenation.

1. Add 10µL unknown samples/standard/DDW as blank into related wells of microplate.
2. Add 200µL Zinc Reagent into all wells.
3. Incubate 5min at 25°C/37°C.
4. Read the wells absorbance with microplate reader/ELISA reader at 546nm.
5. Calculate lactate in unknown samples based on below formula:

$$\text{Zinc } (\mu\text{mol/L or }\mu\text{g/dl}) = \left( \frac{\text{OD Sample} - \text{OD Blank}}{\text{OD Standard} - \text{OD Blank}} \right) \times \text{Standard Concentration}$$
